

Sibyl Doc

PRODUCT OVERVIEW

A secure document system your organization won't outgrow —
AI-powered classification, compliance detection, and enterprise
access controls in one platform.

OVERVIEW

What is Sibyl Doc?

Sibyl Doc is an enterprise-grade records management platform that pairs AI-powered document processing with strong security and compliance controls. It's built for governments, agencies, and regulated organizations that handle sensitive information and need to stay organized, searchable, and audit-ready as they grow.

The problem it solves

Most teams accumulate documents faster than they can classify, secure, and find them. Manual filing is slow and inconsistent, sensitive data slips through unreviewed, and access rules are hard to enforce at scale. Sibyl Doc automates the tedious work — reading, summarizing, categorizing, and compliance-screening every file the moment it lands — while keeping strict clearance levels and role-based access in force.

Who it's for

Government and public-sector agencies, and regulated organizations operating in HIPAA- and CUI-sensitive environments — anyone who needs a scalable, secure system of record without standing up custom infrastructure.

“A secure document system your organization won’t outgrow.”

Elastic storage, approval-gated onboarding, and automated AI processing mean the platform scales with you — compliant from day one.

Why teams choose Sibyl Doc

AI classify & summarize on upload

PII · Confidential · CUI detection

Clearance levels & role-based access

Approval-gated onboarding

MD5 dedup & versioning

Custom taxonomy

Enterprise workflows

Desktop & mobile sync

CAPABILITIES

Everything you need to manage records at scale

A AI-assisted processing

Every upload is automatically read, summarized, and classified — category, business function, document type, department, and security level — with no manual tagging.

C Compliance & PII detection

Configurable parameters (PII, Confidential, CUI) scan each document for sensitive elements like SSNs, dates of birth, IDs, addresses, and financial accounts.

S Security controls

Clearance levels, role-based access, and per-document security classification keep restricted material in the right hands.

O Approval-gated onboarding

Admins approve new members before they gain access, so the organization scales without losing control.

V Dedup & versioning

MD5 de-duplication and full version history prevent clutter and preserve an auditable trail, with configurable retention policies.

T Custom taxonomy

Define your own business functions, categories, document types, security levels, and suitability flags to match how your organization actually works.

W Enterprise workflows

Route documents through approval steps assigned to admin-defined roles for review, sign-off, and hand-offs.

D Cross-platform sync

Native desktop apps for Windows and macOS plus mobile for Android and iOS keep records in sync wherever work happens.

HOW IT WORKS

From upload to audit-ready in seconds

- 1 Upload anything**
Drag in PDFs, text, images, and more from desktop or mobile. De-duplication catches repeats automatically.
- 2 AI reads & summarizes**
Sibyl generates a plain-language synopsis and extracts the key details of each document.
- 3 Auto-classification**
The document is tagged with category, business function, department, document type, and security level.
- 4 Compliance screening**
Every file is scanned against your PII, Confidential, and CUI parameters, and flagged if concerns are detected.
- 5 Organize, route & govern**
Findable instantly via AI search, routed through approval workflows, and protected by clearance-level access.

The screenshot displays the Sibyl Doc interface for a processed document. At the top, a header reads "Every file, automatically understood" with a subtext "AI synopsis, classification and compliance checks the moment you upload." Below this, a navigation bar includes a "Back to documents" link and a language selector set to "English". A green status bar indicates "AI analysis complete." The document title is "Contoso – Teaming Agreement – Cybersecurity Services.pdf" with a "No description" note. Action buttons include "View", "Regenerate with AI", "AI history", "Edit", "Delete", "Copy link", and "Download latest". The main content area is divided into four sections: "Synopsis" (describing a proposed teaming agreement), "Version history" (showing "Version 1" as "Processed" on 7/26/2026), "Classification" (listing attributes like Security level, Business function, Category, Document type, Department, Suitability, and Source, with "Jordan Avery" listed as the source), and "Compliance assessment" (stating "No compliance concerns detected.").

Each processed document shows an AI synopsis, full classification, version history, and a compliance assessment.

Compliance built into every upload

Sibyl Doc is designed for HIPAA- and CUI-sensitive environments. Administrators define compliance parameters, and the AI checks every document against them — so sensitive data is surfaced, not overlooked.

Access & governance

- Clearance / security levels — higher rank, more restricted
- Role-based access control
- Approval-gated member onboarding
- Versioning with configurable retention

Sensitive data detected

- Social Security & identity numbers
- Dates of birth, driver's license, passport
- Home address, phone, personal email
- Financial account & card numbers

Admin-configurable compliance parameters — PII, Confidential, and CUI — applied to every document.

Parameters are yours to extend. System-provided groups like PII, Confidential, and CUI ship ready to use, and you can add custom parameters and data elements specific to your organization.

See your whole library, your way

A live dashboard gives leaders an at-a-glance view of the entire records estate, while flexible exploration tools help everyone find exactly what they need.

Dashboard — documents, storage, security levels, and categories in one live overview.

Q AI search

Search across titles, descriptions, and AI summaries for your whole organization — and land on the right file in seconds.

N 3D Navigator

Explore your collection as an immersive, drillable space grouped by category, department, and more.

P Pivot cards

Zoom through the library by any dimension — file type, department, security level — drill in and back out.

E Explorer & groups

Familiar folders-and-groups view for structured, hands-on organization when you want it.

Ready to take control of your records?

Give your organization an intelligent, secure, and scalable system of record — compliant from day one and built to grow with you.
